### **Current interest in laser dentistry**

Laser therapy for oral potentially malignant disorders

Laser therapy for primary care

Laser dentistry education

### **Laser Dentistry from onsite to hybrid education in the pandemic era**

Owing to the COVID19 pandemic, the local and overseas travelling has been limited. Even though online education has been introduced for more than 10 years, the full online based study without onsite is challenging. We introduced the full online course in laser dentistry which was composed of theory and practice. The study model called the hybrid: online and onsite was conducted. This comprised online study with electronic module and discussion on e-classroom, hybrid stimulation laboratory practice and clinical demonstration. The paper examination and interview evaluation were conducted. There were 11 participants in this course. They were successfully passed the evaluation at the

score in the range of 70 to 90 percent. The laser dentistry education is able to arrange by the full online course using the hybrid model.

**Take home message for audience: The laser dentistry education can be delivered via full online in the pandemic era by using efficient study model, sufficient knowledge and active networks.**
